

patternEXPERT

***The perfect CAD solution for
constructing your patterns and digitally
optimizing for automatic cutting***

Take advantage of patternEXPERT for capturing pattern data

The patternEXPERT...

- ◆ *optimizes the capture of your patterns*
- ◆ *offers a clearly arranged model manager*
- ◆ *makes it easy to change models and patterns*
- ◆ *imports data from other CAD systems*
- ◆ *offers benefits across many industries*

know how

Take advantage of patternEXPERT for capturing pattern data

Optimize your capture of pattern data

The digitization and construction of patterns is simple with the user-friendly functions of patternEXPERT. Digitise the pieces of your model with a few points, in a short period of time. Sound signals confirm actions to reduce user errors. Extensive but uncomplicated construction functions offer many possibilities for creating patterns for a model, right on screen.

Details like mirror images, notches, quality zones, specific orientations based on the material, descriptions, and so on, are all considered during the one-step capture of pattern data. And from this, the creation of sewing plans is simple.

Capture base patterns once. Then, use them for similar models at any time, as often as you like. This reduces the expense of capturing new patterns for each and every model.

Use the clearly arranged model manager

patternEXPERT offers you instant access to all of your model and pattern information, based on your product variations, including surface measurements, pattern-to-model associations, pattern details, pattern revisions, and so on. And this model and pattern data can be printed in a number of ways that make it easy to use.

Make your modification process flexible

With patternEXPERT, you can react quickly to modifications of a model and its patterns.

Change your patterns in the shortest time possible and update the system with new models. Beyond this, use the available base patterns when you need them: duplicate and alter existing patterns to create a new model or a new variant in a greatly reduced time period.

Save your previous investments

patternEXPERT imports data from other CAD systems and automatically converts it for cutting with the Expert system. This means you can still leverage your previous investments while benefiting from the many advantages of the patternEXPERT.

Operational fields of the patternEXPERT

patternEXPERT is suitable for many industries that cut flat materials. These industries include the automotive industry; upholstery, handbag and footwear industry; aviation and aerospace industry; as well as the many industries that cut technical textiles.
