

# *leather nestEXPERT - visualnest*

***The perfect solution for maximizing your  
yield of leather cutting even if shade  
variations have to be considered***

***Make use of all the advantages of the  
software module leather nestEXPERT for your leather cutting requirements***

## ***The leather nestEXPERT - visualnest...***

- ◆ *controlled by laser, working directly on the skin*
- ◆ *achieves maximum yield*
- ◆ *combines various interactive software modules*
- ◆ *guarantees maximum yield*
- ◆ *easy, user-friendly, ergonomically correct operation*
- ◆ *based on standard of the CE norm*

***know how***

## **You can also profit from the leather nestEXPERT - visualnest for your leather cutting**

### **Optimize your results, precision controlled by directly on the hide**

*This software is suitable for all companies, who have to consider fluctuations of colours and grains when optimizing the yield of leather cutting.*

*With the leather nestEXPERT - visualnest software you can work directly on the hide. The laser highlights the movements of the patterns and their position on the hide. This gives you the combination of simple handling and optimum results and enables instant checking of the result.*

### **Nest according to colour shades**

*The laser permits you to rotate the position of the pattern according to the run of colours and structures. This means optimum yield coupled with immediate results for costing.*

### **Combine the automatic and inter- active optimization**

*As with the normal standard of all EXPERT solutions, you can change from automatic to interactive modes. Parts that have to be cut considering special shade requirements are optimized interactively. The balance of the nesting is done automatically.*

*Needless to say that the use of the automatic nesting software improves your throughput considerably. We would like to stress that functions like the defined positioning of the patterns are as much part of the software as the optimal placing of groups of patterns.*

### **Maximize your cutting yield**

*In the shortest possible period of time you have the opportunity to combine the automatic and interactive software to achieve maximum results. The software also allows you to do the exercise of optimizing the yield more than once and then select the result that is most suitable for you.*

### **Work can be carried out ergonomi- cally correct and user-friendly**

*The operator can be seated in front of the screen in close proximity to the hide.*

*All screens are supplied according to TCO standard norms. The user interfaces are selfexplanatory and easy to understand.*
